

Posture Remediations:

Posture remediations are the actions AnyConnect will take if it determines that the endpoint is out of compliance. There are two main types of remediation AnyConnect: automatic and manual. Automatic remediation is performed by AnyConnect without intervention by the end user of the endpoint. Manual remediation requires the end user of the endpoint to resolve the compliance issue before the endpoint is allowed network access. posture remediation's if required can be configured. Posture remediation's are the methods AnyConnect will handle endpoints that are out of compliance. Some remediation's can be automatically resolved through AnyConnect while other might be resolved manually by the end user.

Posture Remediation Options such as Message Text (Local Check), URL Link (Link Distribution), File Distribution, Launch Program, Antivirus Definition Update, Antispyware Definition Update, Patch Management Remediation, Windows Update etc.

The screenshot shows the Cisco Identity Services Engine (ISE) web interface. The top navigation bar includes 'Home', 'Context Visibility', 'Operations', 'Policy', 'Administration', and 'Workspaces'. The 'Policy' menu is expanded, showing 'Policy Sets', 'Profiling', 'Posture', 'Client Provisioning', and 'Policy Elements'. The 'Policy Elements' menu is further expanded, showing 'Dictionaries', 'Conditions', and 'Results'. The 'Results' menu is selected, and the 'Posture' option is highlighted in the left sidebar. Under 'Posture', the 'Remediation Actions' option is selected. The main content area displays 'AS Remediations' with a table of remediation actions.
