

## Conditions Studio:

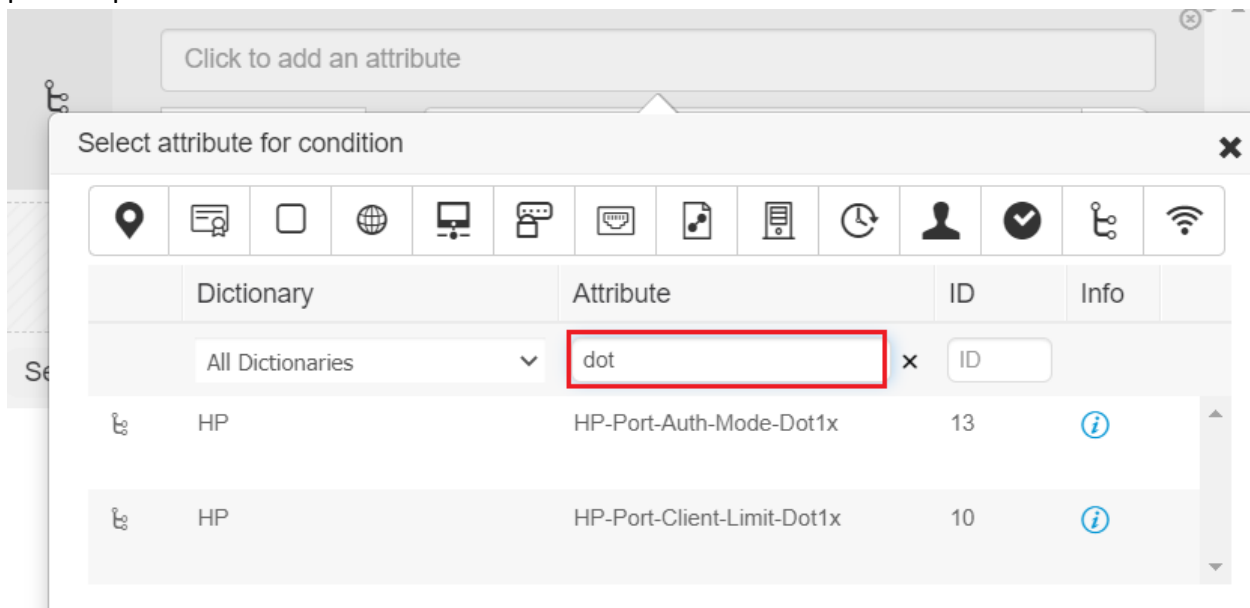

Use the Conditions Studio to create, manage and re-use conditions. Conditions can include more than one rule, and can be built with any complexity including only one level, or multiple hierarchical levels. When using the Conditions Studio to create new conditions, you can use the condition blocks that you have already stored in the Library and you can also update and change those stored condition blocks. While creating and managing conditions later, easily find the blocks and attributes that you need by using quick category filters, and more. The Condition Studio is divided into two main parts: The Library and the Editor. The Library stores condition blocks for reuse while the Editor enables you to edit those saved blocks and create new ones. If you click on the top box under the Editor, it will quickly pull up the available attributes.

If want to jump to a set of dictionary conditions, you can choose from the drop-down of available **ictionaries** on the left.

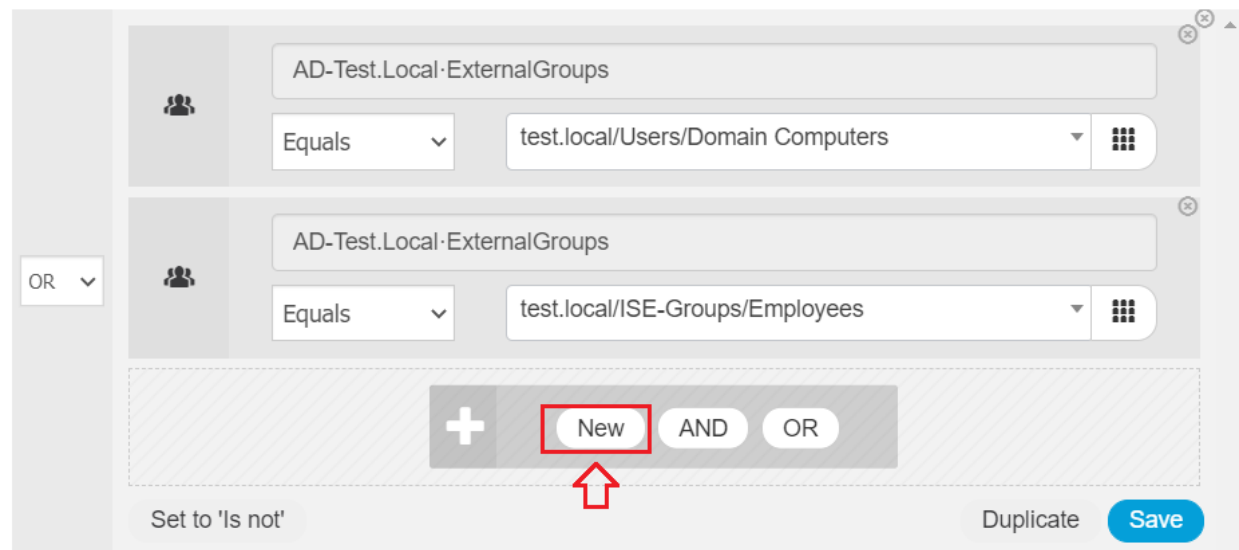

If you don't even want to bother and you have an idea of what your condition is, you can start to type it in on the right side instead and have everything containing those characters quickly pulled up instead.

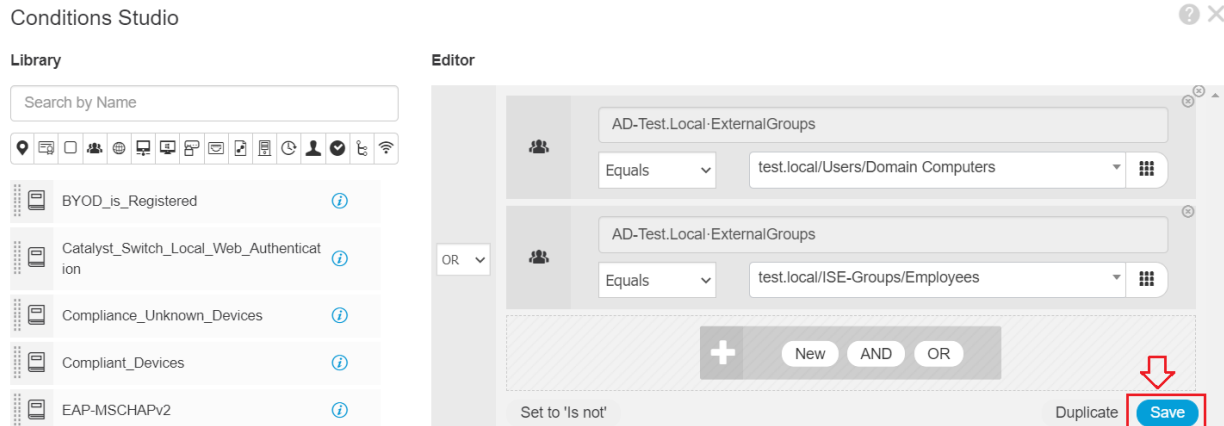

After you add a new attribute, click **New** to add another one.

**Editor**

Now let's say you have a set of conditions you will want to reuse over and over again. you can click **Save** to save them in the Library on the left-hand side of the **Conditions studio**.

Type the name for Library Condition and click **Save**.

Save condition

☐ Save as existing Library Condition (replaces current version and impact all policies that use this condition)

Select from list

☒ Save as a new Library Condition

My-Wired-Dot1x

Save

Now when you want to reuse that compound condition in future rules, you just need to start to type it on the left side of the Conditions Studio to pull it up and then drag-and-drop it onto the right side.
