DACL (Downloadable ACL):

o   In Cisco ISE DACL is a term, which is stands for Downloadable Access Control List.

o   The DACL is configured on the authentication server instead of every single device.

o   DACL provides benefit of a single point of configuration when need to changes ACL.

o   DACL need to configure only once, on one device, & apply same ACL on many devices.

o   When user establishes a connection & authenticates, NAD downloads ACL and applies.

o   The DACLs are strong tools to limit the access dynamically as user access the network.

o   By using the Downloadable ACL, users can be restricted according to related policies.

o   These Downloadable Access Control Lists can be assigned to different groups or users.

o   DACL is configured on authentication server & can be downloaded on multiple devices.

o   The Downloadable Access Control List (DACL), provides single point of configuration.

o   Changes & modification are done on single device instead of modifying on all devices.

o   The Downloadable Access Control List (DACL), is related to the authentication process.

o   When user or device is authenticated, Downloadable ACL related to that Policy applies.
